## Abstracts

The global Lead Shot market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

The weight of lead makes it the ideal material for use as ballast or counterweight. The main advantage of using a lead shot, versus a piece of lead, is that it can practically be used as a liquid because it adapts to the container to be filled, thus allowing an easy material recovery for subsequent works. At a rough estimate, it is considered that when using lead shots, the free space among balls reduces density to 7 g/cm<sup>3</sup> instead of the usual 11.3 g/cm<sup>3</sup> of lead.

xcellent for ballast applications due to its flexibility and ability to fill a shape. Used in various situations, especially where a dense, pourable weight is required.
