Lead Tetracetate is widely used as a highly selective oxidizing agent in organic synthesis such as oxidation of glycols into aldehydes, preparation of cyclohexyl acetate, production of oxalic acid, and in structural analysis of sugars. It is a general-purpose oxidant used for the initiation of ionic and radical oxidative processes of alkenes, alcohols, amines, and carboxylic acids. It is one of the versatile precursors for lead-containing compounds. Alcohols can be oxidized to aldehydes or carboxylic acids while secondary alcohols can be oxidized to give ketones.
