## Abstracts

The global Leaded Axial Multilayer Ceramic Capacitor (MLCC) market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A Leaded Axial Multilayer Ceramic Capacitor (MLCC) is an electronic component used for storing and discharging electrical energy in various electronic circuits. Unlike surface mount MLCCs, which have flat, surface-mountable terminations, axial MLCCs have wire leads extending from each end, allowing them to be inserted and soldered into through-hole circuit boards.

Ceramic capacitors are electronic components used in a wide range of applications to store and release electrical energy. They are known for their reliability, compact size, and cost-effectiveness. The global demand for ceramic capacitors has been on the rise due to the growing use of electronics in various industries. This includes consumer electronics, automotive, industrial equipment, telecommunications, and more. The trend of miniaturization in electronic devices, such as smartphones, wearables, and IoT devices, has driven the need for smaller and more compact ceramic capacitors. The global market for ceramic capacitors is expected to continue growing as electronic devices become more integrated into various aspects of daily life, and as emerging technologies like 5G and IoT continue to expand. Innovations in materials and manufacturing processes will play a significant role in shaping the future of ceramic capacitors.
