## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Leaky RF coaxial cables, also known as leaky coaxial cables, can be divided into different types based on their construction and design characteristics. This type of cable is designed to spread radio frequency (RF) signals within a specific area, allowing it to provide wireless communication signals in places that would otherwise be difficult to reach (such as tunnels, subways, inside buildings, etc.). The cable is specifically designed to 'leak' radio frequency signals so that wireless devices along the route can receive those signals and signals from those devices, allowing for two-way communication. This design feature makes them useful when providing wireless service in hard-to-reach areas.
