The global LED Amber Light for Semiconductors market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

LED amber lights for semiconductors are used for lighting in semiconductor factories where photosensitive materials are handled. They are often referred to as amber lamps due to their characteristic amber lighting.

Traditionally, amber fluorescent lamps were used, but now LED lamps that cut off wavelengths below 500 nm, including ultraviolet rays, have become the standard.

During the semiconductor manufacturing process, circuits are created on silicon wafers by UV irradiation in a process known as ?exposure.? Ordinary lighting alters the silicon wafer when exposed to ultraviolet light, necessitating the use of lamps that filter out ultraviolet rays.
