The LED die bonding machine is a professional model for die bonding of LED products. It is controlled by a computer and equipped with a CCD image sensor system. The CCD system scans first to determine the correct path, and then enters the programmed program and easily press the button. The whole work flow can be realized: firstly, the product that needs to be die-bonded is solidified on the jig, dotted with red glue, the LED is sucked through the suction nozzle, and then the LED is fixed on the product. It should be noted that the solidified product is best cured within 1 to 2 hours.
