According to our LPI (LP Information) latest study, the global LED Chip and Module market size was valued at US\$ 4114.6 million in 2023. With growing demand in downstream market, the LED Chip and Module is forecast to a readjusted size of US\$ 5862.2 million by 2030 with a CAGR of 5.2% during review period.

The research report highlights the growth potential of the global LED Chip and Module market. LED Chip and Module are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of LED Chip and Module. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the LED Chip and Module market.

Epi/chip. Epitaxy refers to the process of evolving a wafer (sapphire or SiC, for instance) by depositing epitaxial layers on the wafer using MOCVD. Creating the epitaxial layers is the most critical and capital-intensive step in LED manufacturing. After additional wafer processing to create the metal connection, the wafer is cut up ('diced') into chips. Although it can be used for different applications, the quality requirements (mainly efficacy) of the epi/chip differ by application.

Module (sometimes called light engine). Creation of a module (light engine) is the next step in the LED lighting value chain. The module (light engine) mainly consists of one or more LED packages, secondary optics, a heat sink and an electrical driver. The LEDs are mounted on a PCB (printed circuit board), and the modules (light engines) are

integrated with optics and thermal/power management components to optimize the module (light engine) to each application.

The top 4 of global LED Chip and Module include San'an Opto, ETI, HC SemiTek and Lattice Power, with about 77% market shares.

Europe is the largest consumption place, with a consumption market share nearly 27%.
