The global LED Display Calibration System market size is predicted to grow from US\$ 229 million in 2025 to US\$ 299 million in 2032; it is expected to grow at a CAGR of 3.7% from 2026 to 2032.

The LED display calibration system is a high-precision image correction solution specially designed for the LED display industry. Composed of professional optical testing equipment, analysis software and calibration algorithms, it collects luminance and chromaticity data of each pixel and lamp bead on the screen. The system automatically corrects module color difference, brightness unevenness, color mottling and white balance deviation, unifies the overall color and brightness consistency of the entire screen, and eliminates visual differences in splicing seams. It also supports factory calibration, on-site maintenance correction and aging attenuation compensation. It effectively improves picture purity, color reproduction and visual uniformity, extends the service life of displays, and serves as a core supporting system to ensure the image quality and long-term stable operation of high-end LED screens.
