The global LED Driver market size is predicted to grow from US\$ 2429 million in 2025 to US\$ 3490 million in 2031; it is expected to grow at a CAGR of 6.2% from 2025 to 2031.

An LED driver (power supply) is an electrical device which regulates the power to an LED or a string (or strings) of LEDs. It controls the current flowing through the LED. What makes a driver different from conventional power supplies is that an LED driver responds to the ever-changing needs of the LED, or circuit of LEDs, by supplying a constant amount of power to the LED, as its electrical properties change with temperature.

Global LED Driver key players include TI, Maxim, Linear, etc. Global top three manufacturers hold a share about 35%.

China is the largest market, with a share about 30%, followed by Europe and USA, both have a share over 20 percent.

In terms of product, DC-DC is the largest segment, with a share about 55%. And in terms of application, the largest application is Illumination, followed by Backlighting.
