LED electromagnetic compatibility testing refers to the process of testing and evaluating the performance of LED lighting products in the electromagnetic environment. LED products emit electromagnetic radiation when working and are also very sensitive to external electromagnetic interference. Therefore, electromagnetic compatibility testing is required to ensure the normal operation of the product in the electromagnetic environment. LED electromagnetic compatibility testing mainly includes two aspects: radiated electromagnetic compatibility testing and conducted electromagnetic compatibility testing. By testing and evaluating indicators such as electromagnetic radiation and conducted interference of LED products, it is judged whether the product complies with relevant standards and regulations. Doing so can ensure the reliability and stability of LED products in the electromagnetic environment, while also ensuring the legitimacy and reliability of the products in the market.

The global LED Electromagnetic Compatibility Testing market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
