LED Landing Light is a high-intensity lighting system installed on the front of the aircraft landing gear or fuselage. It uses light-emitting diode (LED) technology to provide powerful lighting when the aircraft takes off and lands. Compared with traditional halogen or xenon lamps, LED landing lights have longer service life, higher brightness and lower power consumption. Its main function is to provide pilots with a clear view of the ground at night or in low visibility conditions to ensure safe landing of the aircraft, while improving the visibility of ground workers and other aircraft.

The global LED Landing Light market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
