The LED laryngoscope handle is a medical device commonly used for examination of the mouth, throat and vocal cords. The handles are usually made of metal or plastic and have built-in LED lights that illuminate the larynx for a clearer view. The laryngoscope blade is attached to the end of the handle and is used to examine the mouth, throat and vocal cords for lesions or abnormalities. When using the LED laryngoscope handle for inspection, the doctor inserts the laryngoscope blade into the patient's mouth or nasal

cavity and fixes the handle on the blade. By illuminating the larynx with the LED light built into the handle, the doctor can observe the condition of the larynx and carry out necessary examination or treatment. Compared with traditional laryngoscopy tools, using the LED laryngoscope handle can provide clearer and more accurate images, while reducing the labor intensity of doctors and improving diagnostic efficiency. In addition, the LED laryngoscope handle can also provide light sources of different colors so that doctors can observe different types of lesions or tissues
