The global LED Modular Display market size is predicted to grow from US\$ 4158 million in 2025 to US\$ 6775 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

LED modular displays are display devices composed of multiple standardized LED display modules spliced together, achieving image and video display through dot-matrix light emission. They feature high brightness, long lifespan, seamless splicing capabilities, and flexible size configurations, and are widely used in commercial displays, outdoor advertising, command and control, and stage presentations.

The upstream mainly includes LED chips, packaging devices (SMD/COB), driver ICs, power supplies, PCB substrates, and structural materials; the downstream primarily targets commercial advertising media, sports stadiums, conference and exhibition venues, security command centers, smart cities, and public information display markets.

In 2025, the global LED modular display market price was \$42 per unit, with sales of approximately 101.2 million units, a global annual production capacity of 120 million units, and an industry profit margin of 20%.

Global Market Future Development Trends:

With the increasing demand for digital communication and information visualization, LED modular displays are rapidly penetrating indoor commercial displays, corporate conferences, education, and public information sectors, moving beyond traditional outdoor advertising. Their advantages in large size, high brightness, and all-weather operation make them a significant alternative to LCD video walls, resulting in steady market demand growth.

Future products will continue to upgrade towards smaller pitch, Mini LED, and COB packaging, improving resolution, contrast, and reliability. Modular design and highly integrated drive solutions help reduce maintenance costs and improve display consistency, driving LED modular displays into high-end display and close-viewing applications.

As upstream chip efficiency improves and mass production increases, unit display costs continue to decline, facilitating faster adoption in the mid-range commercial market. Simultaneously, manufacturers are shifting from single hardware supply to a 'display system + control software + operation and maintenance services' model, enhancing customer loyalty and driving the global LED modular display market towards parallel development of scale and service.
