The global LED and HID Grow Light market size is predicted to grow from US\$ 1049 million in 2025 to US\$ 1483 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

LED plant growth lights are lamps that use light-emitting diodes (LEDs) as light sources to stimulate plant growth by emitting electromagnetic spectrum suitable for photosynthesis. LED is a semiconductor solid-state light-emitting device that can directly emit red, yellow, blue, green, cyan, orange, purple, and white light. Therefore, LED plant growth lights can flexibly adjust the spectrum to better meet the growth needs of plants. HID plant growth lights are the abbreviation of high-pressure gas discharge lamps, which are composed of HID electric light sources, driving power supplies (ballasts), lamps and other parts. HID plant growth lights generate light energy through high-pressure gas discharge to provide plants with the required growth light.

With the development of modern agriculture, new forms of agriculture such as greenhouses, plant factories, and vertical agriculture have become popular, and the demand for plant growth lamps continues to grow. The government attaches great importance to the development of facility agriculture and has introduced a series of policies to provide strong policy guarantees and market incentives for the research and development and application of key facility agriculture technologies such as plant growth lamps. As one of the world's largest agricultural producers, China has shown great potential in the LED plant lamp market. The Chinese government has given strong support to agricultural science and technology innovation and the application of energy-saving and environmental protection technologies, providing strong policy guarantees for the development of the LED plant lamp industry. The Chinese market's consumer demand for LED plant lamps continues to grow, mainly in the fields of greenhouse

planting, indoor vertical farms, and home green plant breeding. Countries such as Germany, the United Kingdom, and France are the main driving forces of the European market, with complete agricultural infrastructure and advanced planting technology, as well as a mature LED lighting industry chain. Europe pays more attention to the use of LED plant lamps in organic agricultural production. In short, the market for LED and HID plant growth lamps is in a rapid development stage. With the development of modern agriculture, policy support, and the improvement of environmental awareness, the market demand for plant growth lamps continues to grow. LED plant growth lights have gradually become the mainstream products in the market due to their advantages such as high efficiency and energy saving, adjustable spectrum, long life and low heat. Although HID plant growth lights still have a large market share, they are gradually being replaced by LED products. In the future, the plant growth light market will develop in the direction of intelligence, diversification and customization, and the market scale will continue to expand.
