LED Pattern Lights are decorative lighting fixtures that use light-emitting diodes (LEDs) as light sources to form various patterns or shapes through specific design and manufacturing processes. Such lamps usually include LED iron frame pattern lights, LED aluminum frame pattern lights, LED stainless steel light paintings, LED flat light paintings, LED glue modeling lights and LED Christmas lights. The characteristic of LED pattern lights is that they can be designed into various three-dimensional or two-dimensional graphics according to the image characteristics of the object, and after being powered on, they will present a colorful lighting effect that is consistent with the image of the actual object. They combine iron, aluminum, stainless steel and other skeleton structures with LED light strips or light strings to achieve a variety of changes in shapes and colors. They are widely used in holiday decorations, street lighting, urban landscape beautification, park greening, hotel facades and commercial applications. Space and other scenes not only add beauty, but also provide energy-saving and efficient lighting solutions.

The global LED Pattern Light market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
