Abstracts

The global LED Perimeter Displays market size is predicted to grow from US\$ 175 million in 2025 to US\$ 279 million in 2032; it is expected to grow at a CAGR of 7.9% from 2026 to 2032.

LED Perimeter Displays, are long-format LED display systems installed around sports fields or arenas for dynamic advertising, sponsor exposure, event information and broadcast-visible content. They are designed for stadium environments and usually require high brightness, high refresh rate, weather resistance, impact protection, fast installation, reliable control systems and athlete-safe cabinet structures. In 2025, Global LED Perimeter Displays sales are estimated at about 210 K Sqm, with an average ex-works price of around 850 US\$/Sq m.

The LED perimeter display value chain includes upstream LED packages, driver ICs, PCBs, power supplies, control cards, cabinet structures, protective masks, cables and control systems; midstream LED module and display manufacturers; and downstream customers such as stadiums, event operators, advertising agencies, sports clubs, school sports facilities, concerts and large-scale event venues.

The LED perimeter display market is mainly driven by sports commercialization, stadium digital upgrades, dynamic sponsor advertising and higher broadcast-quality requirements. Static boards cannot support real-time content changes, regionalized advertising, multi-language sponsor displays or high-quality TV-visible content, so football, basketball, ice hockey and multi-purpose stadiums are increasingly upgrading to LED perimeter systems.
