## Abstracts

The global LED Rotating Beacon Light market size is predicted to grow from US\$ 599 million in 2025 to US\$ 779 million in 2032; it is expected to grow at a CAGR of 3.8% from 2026 to 2032.

In 2025, global LED Rotating Beacon Light production reached approximately 6,800 k units with an average global market price of around US\$ 90 per unit, and a gross profit margin of approximately 10%-30%. LED Rotating Beacon Lights are visual warning devices that create a rotating or simulated-rotating light pattern to alert people to hazards, vehicle movement, or operational status. Modern designs often use LED arrays and optics with electronic control to mimic rotation without mechanical parts, or combine LEDs with a small motor-driven reflector for traditional rotation. They are widely used on industrial vehicles, forklifts, construction equipment, emergency and service vehicles, airport ground support equipment, and factory automation lines. Key requirements include high visibility, reliable flash/rotation patterns, low power consumption, long lifetime, vibration resistance, and weatherproofing. Options include multiple colors, mounting bases, audible alarms, and smart control interfaces for integration with safety systems.

The industrial chain of LED Rotating Beacon Lights includes upstream components such as LED chips, lenses, reflectors, drivers, PCBs, microcontrollers, motors/gears (for mechanical types), housings, seals, mounting bases, wiring harnesses, and packaging materials. Midstream manufacturing covers optical design, PCB assembly, thermal management, enclosure sealing, functional testing, and reliability validation for vibration and ingress protection. Downstream users include industrial vehicle OEMs, safety equipment distributors, factories, logistics centers, construction sites, and municipal service fleets. Services include configuration support, installation guidance, warranty

service, and spare parts supply.
