## Abstracts

The global LED Shelf Lighting market size is predicted to grow from US\$ 592 million in 2025 to US\$ 903 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

LED shelf lighting is a linear lighting system specifically designed for display shelves, display racks, and display cases. It utilizes high-brightness, low-power LED light sources to provide uniform, soft, and adjustable lighting effects. The system typically consists of LED strips, power drivers, connectors, and controllers, and can be embedded or installed in shelf panels, uprights, or back panels. The product supports multiple color temperatures (2700K–6500K), color rendering index (CRI?80), dimming methods (PWM, 0-10V, DALI), and intelligent control (Bluetooth, Zigbee, Wi-Fi). Traditional shelf lighting suffers from uneven lighting, high energy consumption, and difficult maintenance. LED shelf lighting, through its efficient and energy-saving light source and flexible installation methods, enhances product visibility, improves customer experience, and reduces operating costs, making it particularly suitable for retail and exhibition scenarios with high display effect requirements. The average price of this product is approximately US\$10 per meter, with global sales of approximately 60.5 million meters.

United States market for LED Shelf Lighting is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for LED Shelf Lighting is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for LED Shelf Lighting is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
