An LED SiC Coated Graphite Susceptor is a critical component used in the production of LED wafers through chemical vapor deposition (CVD) processes. This susceptor is made of graphite and coated with silicon carbide (SiC) to enhance its thermal and chemical stability. The SiC coating protects the graphite from reacting with the process gases and provides a high-temperature, corrosion-resistant surface. During the LED wafer fabrication, the susceptor holds the substrate wafers and ensures uniform heating and temperature distribution, which is essential for the precise growth of semiconductor layers. This results in improved efficiency, quality, and yield in LED manufacturing, making SiC coated graphite susceptors vital for the production of high-performance LED devices.

The global LED SiC Coated Graphite Susceptors market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
