An LED Silicon Carbide (SiC) carrier is a substrate used in the manufacturing of light-emitting diodes (LEDs), leveraging the properties of silicon carbide to enhance the performance and efficiency of the LEDs. Silicon carbide is known for its high thermal conductivity, robustness, and ability to handle high power densities, making it an ideal material for use in LED carriers. By providing a stable and efficient platform for the LED's semiconductor layers, SiC carriers help improve heat dissipation, increase light output, and extend the lifespan of the LEDs. These carriers are particularly useful in high-power and high-brightness LED applications, such as in automotive lighting, outdoor displays, and advanced general lighting solutions.

The global LED Silicon Carbide Carrier market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
