The global LED Steady State Solar Simulator market size is predicted to grow from US\$ 117 million in 2025 to US\$ 178 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

LED steady-state solar simulator combines light close to the solar spectrum by precisely controlling the luminous intensity of LEDs of different wavelengths. Its core components include LED light source array, optical system, control system, etc. The control system can adjust the output power and spectral distribution of the light source to meet different test requirements. The optical system is used to collimate, focus and homogenize the light emitted by the LED to ensure that the light irradiating the sample under test has a stable intensity and uniform distribution.
