The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A stroboscope is an instrument which emits a series of intense, brief flashing light at the specific intervals. When that flashing light from the stroboscope is being directed towards an object rotating at a very high speed, that moving fan appears to be stand still. The stroboscope makes that fan rotating at a very high speed appear to be stand still because of the visual persistence of the human eye. When the frequency of the flashing light from that stroboscope is adjusted to harmonize with the rotation speed of fan, the number of apparently stationary fan blade someone see corresponds to the actual number of fan blade .
