Abstracts

The global LED Tri-color Cold Light Lamp market size is predicted to grow from US\$ 117 million in 2025 to US\$ 152 million in 2032; it is expected to grow at a CAGR of 3.6% from 2026 to 2032.

In 2025, global sales of LED Tri-color Cold Light Lamp reached approximately 20 million units, with an average market price of about USD 6 per unit, an annual production capacity of roughly 24 million units, and an industry-average gross margin of approximately 20%.

A LED Tri-color Cold Light Lamp uses a red–green–blue narrow-spectrum phosphor system (or equivalent emission system) to generate light, delivering higher color rendering accuracy and better visual comfort. Common formats include tubes, ceiling lights, and panel lights.

Upstream suppliers provide glass housings or lamp bodies, phosphors or LED chips, drivers, and electronic components; midstream players focus on packaging, driver integration, and final assembly; downstream demand comes mainly from schools, offices, hospitals, and laboratories where high color rendering and visual comfort are required, with steady replacement and energy-upgrade demand.

LED Tri-color Cold Light Lamp is a “quality-of-light” segment positioned around better color rendering and visual comfort, historically rooted in tri-phosphor fluorescent products and increasingly shifting toward high-CRI LED solutions. Demand is driven less by decorative preferences and more by functional requirements in education, offices, healthcare, retail display, and any environment where accurate color perception and reduced visual fatigue matter. The market is shaped by retrofit cycles, energy-

efficiency regulations, and facility-standard specifications, with procurement often influenced by total cost of ownership (efficiency, lifetime, maintenance) rather than lamp price alone. Competition typically differentiates on color quality consistency (CRI/Rf/Rg), flicker control and driver performance, glare management and optics, and reliability/after-sales support, while LED migration is steadily compressing legacy fluorescent volumes and pushing suppliers toward integrated luminaires and smart-control compatibility.
