LED Variable Message Signs (VMS) are electronic displays that use Light Emitting Diodes (LEDs) to present dynamic messages, often for traffic management, public safety, or information dissemination. These signs can be programmed to show various types of information, such as speed limits, road conditions, warnings, or event notifications. Due to their bright, clear, and adjustable nature, LED VMS are highly visible in different lighting conditions, making them effective for conveying real-time information to drivers, pedestrians, or the public. Their flexibility and visibility make them a crucial tool for modern traffic and event management systems.
