According to this study, the global LED Virtual Production Studio Solutions market size will reach US\$ million by 2029.

An LED Virtual Production Studio is an advanced film and television production environment that utilizes LED screens, sophisticated computer graphics, and real-time rendering technology to create realistic and immersive virtual sets. This cutting-edge technology is revolutionizing the way films, TV shows, commercials, and other visual content are produced.

In a traditional film production, physical sets are built, and green screens are used for adding visual effects and digital backgrounds in post-production.
