## Abstracts

The global Legume Dehulling Machine market size is predicted to grow from US$ 296 million in 2025 to US$ 434 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

In 2024, global Legume Dehulling Machine production reached approximately 23925 units, with an average global market price of around K US$ 12 per unit. A legume dehulling machine is agricultural processing equipment specifically designed to remove the seed coats from various legumes (such as chickpeas, mung beans, peas, lentils, soybeans, etc.). It typically operates on the principles of friction and impact. By creating relative motion between the beans and a rough working surface (e.g., emery wheels, grinding discs) or between the beans themselves, the brittle seed coats are cracked and stripped away. An air aspiration system then separates the loosened hulls from the kernels. Its core value lies in increasing the added value of legume products, improving their taste, reducing cooking time, and meeting the process requirements for further deep processing (e.g., milling, sprouting, making paste).

United States market for Legume Dehulling Machine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
