LEL meter is an instrument used to detect the dangerous level of combustible gases, expressed in Percent (%) LEL, where LEL stands for Lower Explosive Limit. The LEL is different for different gases, but for most combustible gases it is less than 5% by volume. When percentage of a particular gas in atmosphere exceeds its LEL, an alarm signal is activated on the LEL meter.

LEL Meters are used to measure the amount of combustible gas present in atmosphere and are also called as explosimeter or combustible gas detector. LEL depicts the lowest concentration of gas in atmosphere that will catches fire in air, which is its lower explosive limit.

The LEL meter is typically used where flammable gases are stored or processed such oil & gas, refinery & petrochemical industry, chemical, mining, steel mill, automobile, construction, electronics, marine and environment detection where risk of explosion is significant.

The major gases that are monitored using LEL Meter include CO, O₂, CO₂, H₂S, SO₂, NO₂, NO, Methane, Ethane and other flammable gases. There are two type of LEL meter fixed and portable, the fixed LEL meter is installed at a particular locations and it monitors the targeted zone on a continuous basis.

As LEL meter reduces the risk of explosion the market is poised for significant growth in the upcoming years in view of increasing focus on workplace safety especially in hazardous environments.
