The global Lenacapavir market size is predicted to grow from US\$ 147 million in 2025 to US\$ 1785 million in 2032; it is expected to grow at a CAGR of 14.7% from 2026 to 2032.

Lenacapavir is a long-acting HIV-1 capsid inhibitor that exerts its antiviral effect by specifically binding to the viral capsid protein, thereby blocking the assembly, release, and uncoating processes of HIV and ultimately inhibiting viral replication. Characterized by its novel mechanism of action, prolonged half-life, and reduced dosing frequency, it is indicated both for the treatment of adults with multidrug-resistant HIV-1 infection and as a long-acting agent for pre-exposure prophylaxis (PrEP). By offering a novel option for the treatment and prevention of HIV/AIDS, it is particularly beneficial for patients with suboptimal responses to conventional regimens or those with poor medication adherence. In 2025, global Lenacapavir production reached approximately 450,000 vials (???) and 300,000 bottles????

Lenacapavir is the world's first long-acting HIV-1 capsid inhibitor administered only twice yearly. With its disruptive mechanism of action, exceptional clinical efficacy, and extremely low dosing frequency, it is comprehensively reshaping the market landscape for HIV/AIDS treatment and prevention. Its core advantage lies in fundamentally resolving the long-standing challenge of patient adherence associated with traditional daily oral regimens, while also demonstrating potent inhibitory activity against multidrug-resistant viral strains. It serves both as a vital salvage therapy for advanced patients with treatment failure and opens up a highly effective and convenient new avenue for pre-exposure prophylaxis (PrEP) in at-risk populations. Against the backdrop of sustained strong global demand for HIV prevention and treatment, the drug has rapidly secured a strong market position through its differentiated product strengths, competing directly with similar products especially in the long-acting prevention sector and leading the industry's paradigm shift from daily medication to long-acting injection. However, its

market expansion faces significant challenges: the prohibitively high pricing of the originator drug severely limits accessibility in middle- and high-income countries. Although generic drug promotion via patent licensing in low- and middle-income countries has expanded coverage, price stratification, regional access disparities, and supply chain development remain core constraints to its global penetration. Overall, with its breakthrough clinical value and innovative positioning, lenacapavir has emerged as a high-growth blockbuster product in the HIV field, and its future market performance will be highly dependent on pricing strategies, insurance coverage, and collaborative advancement of global public health resources.
