## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Lenses in cameras, microscopes and prisms and lenses in optical equipment such as lasers are often bonded to each other and their housing with special adhesives. So as not to impair the quality of the optics, these special cements must be optically clear adhesives with low shrinkage to prevent stress on the glass lenses. Low shrinkage is often achieved by the addition of nano-sized filler materials.
