The global Lens Transmission Meter market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Lens transmission meter is professionally used for mobile phone lens transmittance test and IR hole infrared transmittance test. The test aperture is 0.5mm, which can test 550nm visible light transmittance and 850nm, 940nm infrared ray transmittance. The lens transmission meter has a real-time dynamic self-calibration function. It will automatically calibrated to 100% transmittance after powering on. This lens transmission meter has a test aperture of only 0.5mm and has wide application.

The eyewear industry has been a significant driver of the demand for lens transmission meters. As the global population ages and the awareness of the importance of eye health increases, the demand for eyeglasses and sunglasses has grown. Lens transmission meters are essential tools for quality control and ensuring that lenses meet specified standards for optical performance. As optical technology continues to advance, there is a need for more precise and advanced testing equipment. Lens transmission meters are being developed with enhanced features and capabilities to meet the evolving requirements of the eyewear industry. With growing awareness of the harmful effects of ultraviolet (UV) radiation on the eyes, there is a rising demand for lenses that provide UV protection. Lens transmission meters play a crucial role in verifying the UV protection level of lenses.
