With growing demand in downstream market, the Lentiviral Production System is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Lentiviral Production System market. Lentiviral Production System are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Lentiviral Production System. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Lentiviral Production System market.

Lentiviruses are a subclass of retroviruses, but unlike other retroviruses, lentiviruses can integrate into the genome of non-dividing cells. As retroviral vectors, lentiviral vectors never contain genes for replication. Therefore, production of lentivirus requires propagation in packaging cell lines (e.g., HEK293 cells transfected with plasmids encoding virion proteins). Lentiviruses are commonly used in cell therapies.
