The global LiDAR Drone market size is predicted to grow from US\$ 46.8 million in 2025 to US\$ 143 million in 2031; it is expected to grow at a CAGR of 20.5% from 2025 to 2031.

LiDAR Drone is an unmanned aerial vehicle equipped with a laser radar (LiDAR) sensor, which is specially designed to obtain high-precision three-dimensional data of terrain, objects or environments. LiDAR technology scans the target with a laser and records the reflected laser beam, calculates the distance from the laser beam to the target, and generates point cloud data. These point cloud data can be used to create accurate three-dimensional models, maps or other geospatial information.

A key driving factor for the growth of the market is the encouragement from governments and research institutes for the adoption of LiDAR drones.
