The global LiDAR Multi-Mirror Scanner market size is predicted to grow from US\$ 100 million in 2025 to US\$ 277 million in 2032; it is expected to grow at a CAGR of 16.8% from 2026 to 2032.

In 2025, global production of LiDAR multi-mirror scanner reached 110,000 units, with an estimated average selling price of \$930 per unit. A LiDAR multi-mirror scanner is a high-speed beam deflection component used in the transmitter or receiver path of a LiDAR system. It typically consists of multi-faceted mirrors/prisms, a precision scanning motor, bearings or air-bearing spindles, a drive controller, an encoding/synchronization detection unit, and matching optical mirror groups. By rotating the multi-faceted mirrors at high speed, the laser beam is continuously reflected out at a predetermined angle to form a horizontal scanning line. It is used in fields such as vehicle ADAS/autonomous driving LiDAR, UAV mapping LiDAR, robot/AGV LiDAR, industrial 3D measurement LiDAR, security and intelligent transportation LiDAR, and topographic mapping and building surveying LiDAR. The upstream mainly includes aluminum alloy or metal mirror bodies, optical glass/metal substrates, diamond turning and ultra-precision machining, reflective coating, brushless DC motors, precision bearings/air bearings, encoders, drive ICs, control boards, lasers, detectors, optical windows, and filters; the midstream includes multi-faceted mirror processing and coating, dynamic balancing, high-speed motor assembly, opto-mechatronics integration, scanning control algorithms, and automotive-grade reliability verification; the downstream includes LiDAR sensor manufacturers, autonomous driving solution providers, robotics companies, drone mapping equipment manufacturers, industrial inspection equipment manufacturers, and OEMs. Gross profit margins range from approximately 30% to 45%.
