The global Lifejacket Lights market size is predicted to grow from US\$ 76.30 million in 2025 to US\$ 104 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

Lifejacket lights are compact emergency visual location devices attached to, clipped onto, or integrated into lifejackets, life vests, and personal flotation devices. Their core function is to emit a white steady or flashing light that helps rescuers identify a person in the water during abandon-ship, man-overboard, night-time rescue, low-visibility, offshore, aviation, and marine emergency scenarios. A typical product consists of a waterproof housing, LED light source, battery, automatic water-activation contacts, manual switch, mounting clip or cable, and in some cases a raised or remote light head to improve all-round visibility. Mainstream certified products are designed around SOLAS/LSA Code, MED, USCG, Transport Canada, CCS, or other class and national approval requirements, with key parameters including luminous intensity, operating duration, flash rate, activation reliability, battery shelf life, water resistance, temperature performance, and transport safety.

Based on our research, lifejacket lights are typical regulation-driven marine safety components. Industry demand is not driven by a single consumer trend, but mainly by marine life-saving appliance requirements, global fleet ownership, periodic replacement, and certification compliance. The SOLAS/LSA Code sets basic thresholds for key parameters such as luminous intensity, operating duration, and light color, while the U.S. PFD light regulatory framework also defines performance and approval requirements for lifejacket/PFD-mounted lights. Although the product is small, it has a clear mandatory safety attribute.

From a product technology perspective, industry innovation is concentrated in high-brightness and long-life LED design, the reliability of automatic water activation, the use

of alkaline batteries as an alternative to lithium batteries for easier transportation, explosion-proof applications, lightweight installation, and integration with inflatable lifejacket structures. The industry does not face an obvious disruptive technology substitute, but electronic positioning devices such as PLBs and AIS-MOB devices will create complementary demand in high-end marine safety scenarios.

From a demand structure perspective, merchant ships, passenger ships, cruise ships, ferries, offshore platforms, naval and government vessels, aviation life vests, and leisure marine activities together form the main sources of demand. The growth rate reflects stable replacement demand for a mature safety product category, fleet growth, the recovery of passenger transport and offshore activities, certification upgrades, and the rising share of high-reliability products, rather than rapid expansion typical of an emerging market.
