The global LiFePO₄ Cylindrical Battery Cell market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

LiFePO₄ Cylindrical Battery Cell has good consistency, high production efficiency, and strong heat dissipation capacity at the system level. After the size upgrade, it can improve to a certain extent the original low single energy density, the large number of battery cells required for the module, and the resulting poor lifespan and complex management. Cylindrical lithium iron phosphate can effectively reduce the cost of battery assembly. The battery cell adopts the end-face welding full-ear process, which has the characteristics of low internal resistance, large discharge current, long cycle life, and high degree of automation.
