A Lifting Ball is a professional lighting fixture that combines a spherical LED light source with a motorized lifting or winch mechanism, allowing the illuminated ball to move vertically in sync with lighting control protocols such as DMX512, Art-Net, or MADRIX. A typical system integrates the glowing ball, the lifting motor or winch, suspension cable components, control interfaces, and programming software, enabling coordinated motion-and-light effects across single fixtures or multi-ball matrix installations. Common product forms include standard illuminated balls, football-shaped kinetic lights, mini balls, pixel/video balls, and spherical array systems. The product is primarily used in concerts, nightclubs, TV stages, banquet halls, commercial interiors, art spaces, and immersive installations where synchronized movement and lighting are required to create dynamic spatial visuals.
