Lifting and Sliding Stereo Garage is one of the most widely applied and technologically mature product categories in the mechanical parking equipment industry. It enables vehicle storage and retrieval through the vertical lifting and horizontal movement of parking platforms or pallets, and is characterized by relatively moderate investment per parking space, strong site adaptability, a mature structural design, and flexible installation and implementation. It is widely used in residential communities, apartment projects, hospitals, schools, government facilities, commercial complexes, and selected public parking facilities. Its major upstream materials and components mainly include steel structures, steel plates and sections, chains or wire ropes, gear reducers, motors, electrical control systems, sensors, limit devices, as well as coating and anti-corrosion materials. Its major downstream customers include parking system investors and operators, real estate developers, hospitals and schools, government and public parking project owners, commercial property holders, and engineering contractors involved in parking system integration and installation. Calculated on a per-space basis, the global Lifting and Sliding Stereo Garage market had an estimated nominal capacity of about 892 thousand spaces in 2025, with sales of about 666.3 thousand spaces and an average ex-works price of about USD 1,688 per space. As this product segment has entered a relatively mature stage of development, faces relatively sufficient market competition, and remains highly dependent on raw material costs, the overall industry gross margin in 2025 is estimated at around 18%-24%. Overall, Lifting and Sliding Stereo Garage remains one of the most fundamental and representative product categories in the global mechanical parking equipment market, particularly in the Asia-

Pacific region and in cost-sensitive projects.
