The global Lifting Wedge market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Lifting wedge is a tool designed for vertical lifting. These tools are wedge-shaped with a stepped leading edge to support weight. When the front edge is placed in the gap between the weight and the ground and a force is applied, the wedge lifts the object vertically. This design simplifies the lifting process and improves efficiency. Both hydraulic and manual lifting wedges are available, with enhancements such as hydraulic pumps and step blocks to suit various lifting needs. They are particularly suitable for tasks that require precision, such as moving machinery, performing maintenance and stacking concrete blocks on construction sites.

United States market for Lifting Wedge is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
