## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Light Capturing Ribbon (LCR) is a breakthrough in the tabbing ribbon on solar cells. This is a unique and innovative approach in order to increase the solar module's efficiency. The approach raises the cell-to-module (CTM) ratio by reflecting light back onto the surface of the cell. In other words, this idea is based-on recycling light at the module's level to increase the amount of light absorbed by the PV module.
