## Abstracts

The global Light Diffusion Film Material market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Light diffusion film materials are specialized films designed to scatter and diffuse light evenly, reducing glare and creating a soft, uniform light output. These films are commonly used in LED lighting systems, display panels, and optical devices to improve light distribution and enhance visual comfort. The materials used in light diffusion films typically include polymers like polyethylene terephthalate (PET), polycarbonate (PC), and acrylics, which are engineered to achieve optimal light-scattering properties. By integrating microstructures or surface treatments, these films help in achieving consistent brightness while minimizing hotspots, making them ideal for applications requiring precise light control.
