The research report highlights the growth potential of the global Light Diffusion Plate for Liquid Crystal Display market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Light Diffusion Plate for Liquid Crystal Display are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Light Diffusion Plate for Liquid Crystal Display. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Light Diffusion Plate for Liquid Crystal Display market.

The working principle of the light diffusion plate is to use chemical or physical means to use the physical imagination of refraction, reflection and scattering when the light encounters two media with different refractive indices on the way, so as to realize the full refraction and scattering of the light. It is widely used in liquid crystal display, LED lighting and imaging display systems.

The preparation methods of the light diffusion plate include the composite technology of extrusion molding and roller embossing, and the technology of preparing the light

diffusion microstructure by hot embossing. Extrusion molding and roller embossing composite technology uses an extruder to manufacture PC sheets. At the same time, different types of light-diffusing particles can be added to the PC sheets to prepare light-diffusing sheets with different effects. The hot embossing method is to prepare a microstructure on the surface of the mold, and then transfer the microstructure on the surface to the surface of the polymer by embossing, and then shape it to obtain the required microstructure. The light diffusion plate is used to fully refract the light And scattering products have broad application prospects. According to the different materials used, it is divided into different types such as PMMA, PS, PET, PC light diffusion board, etc.
