The principle of operation of light field technology is known as the 5-dimensional all-optical function. According to this function, light can be defined by three coordinates in 3D space and has a two-dimensional angle to specify its direction in 3D space. In short, the light field allows an all-optical camera to capture images based on the intensity and direction of the light. Due to the use of multiple sensors, light field technology is proficient at capturing 3D images.

The global Light Field Technologies market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
