The global Light Industrial Wiper market size is predicted to grow from US$ 1977 million in 2025 to US$ 2668 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

Light industrial wipers refer to special wipers with a relatively light texture, mainly used for general industrial cleaning, decontamination, dust removal and wiping of light lubricating residues. In 2024, global Light Industrial Wiper production reached approximately 13,276 million units, with an average global market price of around US$ 145 per thousand units. The production capacity of Light industrial wipers reaches 14,751 million units, and the industry's gross profit margin is approximately between 15% and 30%.

The light industrial wiper industry chain is closely centered around downstream application needs, a typical demand-driven system. The upstream supply chain is comprised of raw fiber materials like cotton, polyester, and viscose, which determine the basic properties of the wipers. The midstream comprises the core manufacturing process, which transforms raw materials into high-value-added finished products through processes like spunlace nonwovens and relies on key technologies like laser edge banding and cleanroom cleaning to control linting and cleanliness. Downstream, through industrial product distributors, e-commerce platforms, and direct sales, the products are widely used in industrial sectors such as automotive manufacturing, machining, electronics assembly, and equipment maintenance. Market demand for these products is highly correlated with the manufacturing industry's economic performance.
