The global Light Scattering Infrared Dust Sensor market size is predicted to grow from US$ 561 million in 2025 to US$ 856 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

Light scattering infrared dust sensor is a sensor based on the principle of light scattering to detect the concentration of dust particles in the air. The light intensity is proportional to the intensity of the electrical signal converted by photoelectric conversion. The relative attenuation rate is obtained by measuring the electrical signal, and then the dust concentration at the measured site is measured. Light scattering infrared dust sensor has the characteristics of high precision and sensitivity, fast response, good stability and low power consumption. It is widely used in air purification, air monitoring, fresh air ventilation and other occasions where the dust concentration in the air needs to be monitored.

United States market for Light Scattering Infrared Dust Sensor is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
