Lightfastness testing service is a service provided by laboratories or testing facilities to determine the resistance of materials, such as dyes, pigments, inks, paints, textiles, and plastics, to fading or color change when exposed to light. This testing is important for industries that produce products that will be exposed to sunlight or other sources of light, as it helps ensure the durability and longevity of the materials. Lightfastness testing typically involves subjecting the material to specific light conditions for a specified period of time and then evaluating any changes in color or fading. The results of the testing can be used to make informed decisions about the suitability of materials for specific applications and to meet industry standards and regulations.
