The lighting distribution box equipment is the equipment responsible for the control, protection, conversion and distribution of electrical energy at the end of the low-voltage power supply system. It is mainly composed of wires, components (including isolating switches, circuit breakers, etc.) and boxes. It is a basic power distribution device that reasonably combines and assembles residual current action protectors and air circuit breakers, so as to realize centralized control of household power supply and protection functions such as grounding, overload and short circuit. There are also busbars for protective grounding wires and neutral wires inside to facilitate the wiring of various low-voltage power distribution systems (TT, TN, IT systems). Lighting distribution boxes are widely used in various buildings, squares, stations, industrial and mining enterprises and other places as the terminal electrical equipment of the power distribution system.
