The global Lightning Protection Systems market size is predicted to grow from US\$ 12460 million in 2025 to US\$ 15710 million in 2031; it is expected to grow at a CAGR of 3.9% from 2025 to 2031.

A lightning protection system (LPS), also known as a lightning rod or lightning conductor system, is a set of measures and devices designed to protect structures and their occupants from the destructive effects of lightning strikes. The primary purpose of a lightning protection system is to safely and effectively conduct the electrical energy from a lightning strike into the ground, thereby preventing damage to the structure and reducing the risk of fire, explosion, or electrical system damage.

Ongoing research and development were focused on materials that can enhance the efficiency and durability of lightning protection components, such as air terminals and conductors. Innovations in materials science may lead to more resilient and cost-effective LPS components.
