According to our LPI (LP Information) latest study, the global Lightning Protection Varistor market size was valued at US\$ million in 2022. With growing demand in downstream market, the Lightning Protection Varistor is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Lightning Protection Varistor market. Lightning Protection Varistor are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Lightning Protection Varistor. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Lightning Protection Varistor market.

As the name suggests, the main job of Lightning Protection Varistor is to protect electrical appliances during thunderstorms. The working principle of this kind of varistor is that it is connected in parallel with the electrical appliance in the circuit. When the electrical appliance is working normally, its own resistance is very large, so it basically has no effect. When a large current flows through the circuit, the lightning protection varistor turns on instantly, causing all the current in the circuit to flow through the lightning protection varistor, thereby protecting electrical appliances. Lightning Protection Varistor is a metal oxide semiconductor non-linear resistor element with zinc oxide as the main component. The resistor is sensitive to voltage. When the voltage reaches a certain value, the resistor turns on quickly. Because the varistor has good non-linear characteristics, large flow rate, low residual voltage level, fast action and no

freewheeling, etc. It is widely used in lightning protection of electronic equipment.
