Lightweight aluminum aerosol cans are pressurized packaging containers made from aluminum, designed to store and dispense liquids, gels, or foams in aerosol form while minimizing material usage through weight reduction. These cans offer advantages such as corrosion resistance, recyclability, and compatibility with a wide range of formulations, making them widely used in personal care, household, pharmaceutical, and food applications. From a value chain perspective, upstream includes aluminum ingots, alloys, coatings, and propellants; midstream involves can forming (impact extrusion), shaping, printing, coating, and valve integration; downstream demand comes from FMCG companies, pharmaceutical manufacturers, and contract fillers. In 2025, the average selling price is approximately US\$0.165 per unit, with global demand reaching around 38.6 billion units. The industry maintains gross margins of 18%-30%, supported by high-volume production, material optimization, and growing sustainability demand.
