A Lightweight Head-Mounted Display (HMD), often referred to as a lightweight headset, is a wearable device designed to deliver immersive visual and audio experiences while significantly reducing the bulk and weight associated with traditional headsets. By adopting compact optics, streamlined materials, and ergonomic design, lightweight headsets minimize strain on the user's head and neck, making them suitable for extended use in applications such as virtual reality (VR), augmented reality (AR), training simulations, remote collaboration, and entertainment. Despite their reduced form factor, these devices are engineered to maintain high-resolution displays, responsive motion tracking, and integrated audio systems, ensuring an engaging and natural user experience. The focus on lightweight construction enhances portability, comfort, and user adoption, making them a critical development in the evolution of wearable display technology.

The industrial chain of a Lightweight Head-Mounted Display (HMD) encompasses upstream suppliers of microdisplays, optics, sensors, processors, and connectivity modules; midstream manufacturers that integrate these components into ergonomic HMD units; and downstream channels including distributors, software developers, and end-users in gaming, simulation, training, and enterprise augmented or virtual reality
